DETAILED ACTION

Priority

Japanese foreign priority document(s) 11-262139, filed September 4, 2000 and submitted under 35 U.S.C. 119(a)-(d), has/have been received and placed of record in the file.

Japanese foreign priority document(s) 11-205912, filed September 4, 2000 and submitted under 35 U.S.C. 119(a)-(d), has/have been received and placed of record in the file.

Information Disclosure Statement

The information disclosure statement(s) filed June 13, 2001 has/have been received and complies with the provisions of 37 CFR 1.97, 1.98 and MPEP § 609 .

Drawings

The drawings are objected to because Fig. 2 (A), Fig. 2 (B), Fig. 2 (C), Fig. 3 (A), Fig. 3 (B) and Fig. 3(C) need to be properly labeled . A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The terms "nearly smooth", "dense surface" and "high density" are of uncertain meaning, rendering the claims vague and indefinite. Said terms are not defined by the claims, and the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention. It is unclear as to how smooth or dense the surface has to be.

Allowable Subject Matter

The instant claims would be allowable over the prior art of record, because the prior art is silent to an electrode comprising a substrate with a plurality of grooves, wherein said grooves are filled with active material to form a smooth surface.

The prior art, such as Motohide, teaches an electrode comprising a substrate filled with active material then forming grooves on the saturated substrate. The grooves

Art Unit: 1746

are not filled with active material, but a formed from the saturated substrate. Therefore, the reference is silent to a substrate with grooves having active material filled therein.
